

SUPER SALES ANALYSIS - Business Analysis Report

Executive Summary

This report presents an interactive Power BI dashboard developed to evaluate overall sales performance. The dashboard enables management to monitor sales, profit, delivery performance, customer distribution, payment preferences, regional performance, and product trends.

Business Problem

Management requires a centralized dashboard to monitor business performance, identify profitable products and regions, understand customer behavior, and support data-driven decisions.

Project Objectives

- Analyze sales performance.
- Monitor KPIs.
- Compare regions, states, categories and customer segments.
- Identify business opportunities.

Dashboard KPIs

Total Sales: 88.37K

Total Profit: 15.44K

Average Delivery Time: 3.94 Days

Customers: 287

Dashboard Analysis

Payment Mode: COD contributes the largest share of sales.

Sales Trend: Sales peak during the final quarter.

State Analysis: California contributes the highest sales.

Category Analysis: Office Supplies lead overall sales.

Sub-Category: Phones generate the highest sales.

Customer Segment: Consumer segment contributes the highest sales.

Regional Analysis: West region dominates overall sales.

Business Insights

1. Focus inventory on high-demand products.
2. Increase marketing in low-performing regions.
3. Promote digital payments.
4. Improve logistics to reduce delivery time.
5. Build customer loyalty programs.
6. Allocate resources based on regional demand.

Power BI Features Used

Power Query, Data Modeling, DAX Measures, KPI Cards, Donut Charts, Bar Charts, Area Chart, Slicers, Interactive Filtering and Dashboard Formatting.

Business Value

The dashboard provides a single source of truth for business performance, helping stakeholders monitor KPIs, identify trends, and make faster strategic decisions.

Conclusion

This Power BI dashboard transforms raw sales data into meaningful business intelligence through interactive visualizations and business-focused insights.
